DETAILED ACTION

Allowable Subject Matter

1. Claims 7-20 allowed.
2. Claims 2-6, 22-24, 27-31, 33, 34 and 36 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 21, 25, 26, 32, 35 and 37-39 rejected under 35 U.S.C. 103(a) as being unpatentable over Ohta et al. (5,978,059) in view of Iguchi (JP 11-185673) further in view of Kishimoto (6,266,122) further in view of Shimizu et al. (5,085,973) further in view of Inoue (6,275,273).

Regarding Claims 1, 21, 25, 26, 32, 35 and 37-39, Ohta et al. disclose a liquid crystal display device with wide viewing angle characteristics where a liquid crystal display device including a first substrate and a second substrate having a liquid crystal composition layer disposed between them, a black matrix formed on at least one of the first substrate and the second substrate and a signal line between a face of the first substrate and a face of the liquid crystal composition layer. Ohta et al. fail to disclose the required black matrix/protrusion configuration, black matrix/protrusion configuration in the required manner, the required

transparent electrode/black matrix configuration and the transparent electrode/black matrix configuration in the required manner. However, Iguchi disclose image display device where the required black matrix/protrusion configuration is disclosed. Furthermore, Kishimoto et al. disclose a liquid crystal display device and method for manufacturing the same where the required black matrix/protrusion configuration in the required manner is disclosed. Shimizu et al. disclose a colored filter element containing layers of polymerizable composition where the required transparent electrode/black matrix configuration is disclosed. Finally, Inoue discloses an active matrix liquid crystal display device having a black matrix and protective film in self-alignment where the required transparent electrode/black matrix configuration in the required manner is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required transparent black matrix/protrusion configuration, black matrix/protrusion configuration in the required manner, transparent electrode/black matrix configuration, and transparent electrode/black matrix in the required manner in Ohta et al. as taught by Iguchi, Kishimoto et al., Shimizu et al., and Inoue respectively, in order to have a liquid crystal display device with higher performance.
